MTH 135 - Introduction to Technical Mathematics
Class #6 Test A

Test A

Quality – Accuracy – Transfer – 100%

Section 1. Inequalities

Graph the inequalities on the number lines provided. Perform a “point test” to prove that the direction of your solution set from the endpoint is correct.

1. $-5 \leq 3y - 2$ <----->

Section 2. Formulas and Literal Equations.

Re-Arrange the following formulas and literal equations to solve for the “asked for” variable.

3. $S = \frac{A - B}{A}$, for B

4. $C = a + bx$ for x .

Section 3. Word Problems.

5. A company plans to issue 24,500 shares of two different kinds of stock which will have a combined value of \$800,000. One stock is worth \$100 per share and the other is \$25 per share. How many shares of each stock will be issued?

7. An airplane made a flight of 1600 miles in 5 hours. In the first 3 hours, it had good weather. It ran in to bad weather which decreased its rate of speed by 75 mph for the rest of the flight. Find the rate of the plane on each part of the trip.

8. A technician had a solution that was 24% sodium citrate and another solution that was 18% sodium citrate. How many liters of both must he mix to produce 90 liters of a 22% sodium citrate mix?

Section 4. Variation.

9. A truck can travel 245 miles on 35.0 gal of diesel fuel. At this rate, how much diesel fuel would be required to go 1250 miles?
10. q is inversely proportional to the square root of p , and $q = 5$ when $p = 9$. Find the constant (k) of variation.

11. Find y when $x = 5$ if y varies directly as x and $y = 36$ when $x = 2$.

Section 5. Functions

12. Evaluate the Given Function: $f(x) = 3x - 2x^2$; $f(-1)$, $f(-3)$

13. $f(p) = p^3 - 2p + 1$; $f(-2)$

14. Graph by the Intercepts Method:
 $2y + 5x = -10$

15. Graph by Choosing 3 x values and solving for 3 y's.

$$y = \frac{3}{2}x - 1$$

x	$y = \frac{3}{2}x - 1$

15. Graph the Linear Equation Using an Accepted Technique. Show All Work.

$$3x + 2y = -6$$

Graphing 2nd Degree Equations – Use Technology and/or An Acceptable Technique.

Graph: $y = x^2 + 2x - 3$

$a = \underline{\hspace{2cm}}$ $b = \underline{\hspace{2cm}}$ $c = \underline{\hspace{2cm}}$

$x = \underline{\hspace{2cm}}$ $= \underline{\hspace{2cm}}$ $= \underline{\hspace{2cm}}$

Identify:

The Vertex Point: $\underline{\hspace{2cm}}$ Max/Min

Any “Zeros” Evident: $\underline{\hspace{2cm}}$

Work:
